

Project Title

Speedz – Automobile Accessories and Spare Parts Management System

The **Speedz – Automobile Accessories and Spare Parts Management System** is designed to automate the management of an automobile accessories and spare parts store. The system maintains customer, product, supplier, employee, sales, inventory, service, and payment information in a centralized database. Customers can purchase automobile accessories and spare parts, request vehicle-related services, and complete payments securely. Employees manage sales transactions, customer services, and inventory updates, while suppliers provide products to the store.

ENTITY	Attributes	Primary Key	Relationships
