Week 7 Report – Automobile Accessories and Spare Parts Shopping Platform

1. Introduction

The main objective of this project is to develop an Automobile Accessories and Spare Parts Shopping Platform. The system manages customer details, product information, inventory, orders, payments, and reviews using SQL queries. It helps retrieve and organize data efficiently.

2. Scenario

The platform allows customers to view automobile accessories and spare parts, check product prices and availability, place orders, and make payments. The administrator can manage inventory, monitor orders, and generate reports about customers, products, and sales activities.

3. SQL Queries

3.1 Basic SQL Queries

4. Result

The Week 7 SQL query section covers basic data retrieval, filtering, sorting, unique value selection, product searching, joins, and business report generation. Screenshots of the executed SQL queries and their results can be inserted in the respective placeholders to demonstrate the system’s functionality.
